

# DR. RAHMAT AIDIL DJUBAIR

Acting Chief Digital Officer | Dean, School of Business and Management | Senior Lecturer, University of Technology Sarawak

ELITE@UM Expert (Universiti Malaya) | CEO, Asia e-Incubation Hub Sdn. Bhd. | Chief AI Advisor, Blackstone Intelligence

Tel 016-772 5496 | slydil@uts.edu.my

## PROFILE

---

Dr. Rahmat Aidil Djubair is the Dean of the School of Business and Management and a Senior Lecturer at the University of Technology Sarawak, specializing in Artificial Intelligence (AI), AI Automation System Development, E-Commerce, Data Management, Digital Marketing, Creative Content Creation and Management Information Systems. Since 1 September 2026 he has also served as Acting Chief Digital Officer of UTS, overseeing all university digital systems. He holds the Malaysian Skills Diploma (DKM) Level 4 in TVET Instruction and is an approved Internal Verification Officer (PPD) for the programme at the UTS Centre of Skills and TVET. With over 8 years of experience at LG Electronics and more than a decade in training and consulting, he has developed a deep understanding of AI and digital technologies and their applications across industries. He is the founder of Asia e-Incubation Hub Sdn. Bhd. (AeIH), which helps small and medium enterprises (SMEs) leverage digital technology and AI to advance their businesses. In recognition of his expertise, he has been appointed and recognized as an ELITE@UM Expert by Universiti Malaya (UM), Malaysia's premier research university, for his contributions in Artificial Intelligence and digital transformation.

## EXPERTISE IN AI AND TECHNOLOGY

---

Extensive expertise in AI that helps businesses improve efficiency, forecasting accuracy, and risk management, and enriches education through personalization, adaptive learning, and administrative automation. Designs end-to-end system automations (from data capture to action and reporting), builds secure AI chatbots with tool use and session memory, and deploys RAG pipelines that ground answers with verified sources. Work includes LLM integration (function calling, guardrails, and evaluation), plus AI+IoT predictive analytics for real-time monitoring, smarter decisions, and optimized operations across business and education.

## DIGITAL AND DATA ANALYTICS SKILLS

---

Expert in digital and data analytics, data management, and big data — turning raw data into clear, actionable insights. Builds end-to-end data systems (ETL, SQL, APIs) and works fluently with Excel (advanced formulas, Pivot Tables), interactive dashboards, and Power BI. Uses Python for data cleaning, automation, and analysis, and designs KPI tracking, cohort analysis, A/B testing, and attribution models. On the marketing side, executes and optimizes campaigns across Facebook Ads, TikTok, Instagram, Google Ads, and e-commerce (Shopee, Lazada), using Google Analytics and first-party data pipelines to guide strategy and improve ROI.

## CONTENT CREATION AND DIGITALIZATION

---

Expert in digital content creation and automation, using AI-assisted tools such as Adobe After Effects, Photoshop, Illustrator, 3D Blender, CapCut, and Canva to produce trendy, high-impact visuals and videos. Leverages next-gen generative platforms (Nano Banana, VEO-3, Sora-2) to accelerate creative ideation, storyboarding, and production, and builds content-creation automations (templates, batch rendering, auto-captioning, multi-format exports, and scheduled posting) that help clients sustain a strong, consistent digital presence across channels.

## ACADEMIC RECOGNITION

---

**ELITE@UM Expert — Universiti Malaya.** Appointed and recognized as an ELITE@UM Expert by Universiti Malaya, acknowledging his standing as a subject-matter expert in Artificial Intelligence, AI system development, and digital transformation, and his contribution to bridging academia and industry through applied AI.

## ACADEMIC QUALIFICATION

---

| Qualification                               | Institution                              | Year | Specialization                                           |
|---------------------------------------------|------------------------------------------|------|----------------------------------------------------------|
| Doctor of Philosophy in Business Management | University of Technology Sarawak         | 2023 | Digital Marketing, Data Management, AI, Content Creation |
| Master of Business Administration           | Chonnam National University, South Korea | 2012 | International Trade                                      |
| Bachelor of Arts (Honors)                   | University of Malaya, Kuala Lumpur       | 2005 | Japanese Studies                                         |
| Bachelor                                    | Meio University, Okinawa, Japan          | 2005 | Japanese Language                                        |

## WORKING EXPERIENCE

---

| Position / Organization                                                                         | Year           | Place                   | Specialization                                |
|-------------------------------------------------------------------------------------------------|----------------|-------------------------|-----------------------------------------------|
| Acting Chief Digital Officer, University of Technology Sarawak (appointed 1 September 2026)     | 2026 – Present | Sibu, Sarawak           | Digital Transformation and University Systems |
| Dean, School of Business and Management, University of Technology Sarawak (appointed June 2026) | 2026 – Present | Sibu, Sarawak           | Management and Leadership                     |
| Chief AI Advisor, Blackstone Intelligence (Blackstone Consultancy)                              | Present        | Kuching, Sarawak        | AI Strategy and Advisory                      |
| CEO, Asia e-Incubation Hub (AeIH)                                                               | 2023 – Present | Sibu, Sarawak           | Digital Marketing, Social Media Platforms     |
| Deputy Dean, School of Business and Management, University of Technology Sarawak                | 2023 – 2026    | Sibu, Sarawak           | Management                                    |
| Head of Program for Marketing, University of Technology Sarawak                                 | 2017           | Sibu, Sarawak           | Digital Marketing and Digital Data Management |
| Senior Lecturer, School of Business and Management, University of Technology Sarawak            | 2016 – Present | Sibu, Sarawak           | Digital Marketing and Digital Data Management |
| Project Manager, LG Electronics Malaysia Sdn. Bhd., Petaling Jaya                               | 2015           | Petaling Jaya, Malaysia | Business and Marketing                        |
| Project Manager, LG Twin Tower, Yeoui-daero, Seoul                                              | 2008           | Seoul, South Korea      | Business and Marketing                        |
| Office of International Centre, Chonnam National University                                     | 2007           | Gwangju, South Korea    | Business and Marketing                        |
| Executive, CIMB Bank, Kuala Lumpur                                                              | 2006           | Kuala Lumpur, Malaysia  | Business and Marketing                        |
| Department of East Asian Studies, University of Malaya                                          | 2005           | Kuala Lumpur, Malaysia  | Business                                      |

## LANGUAGE PROFICIENCY

| Language        | Proficiency (1 Poor – 5 Excellent) |
|-----------------|------------------------------------|
| Bahasa Malaysia | 5 — Excellent                      |
| English         | 4 — Very Good                      |
| Korean          | 4 — Very Good                      |
| Japanese        | 4 — Very Good                      |

## AI PROJECTS — CUSTOM AI TOOLS AND AGENTS

| Project                                     | Usage                                                                                                                                                                           |
|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Tech-to-Speech Generator                    | Converts written teaching notes, announcements, and marketing copy into clear speech audio for videos, podcasts, and social media content.                                      |
| ScriptGenerator                             | Generates TikTok, Reels, and live-selling scripts based on product details, target audience, and campaign objectives.                                                           |
| Automotive AI Agent                         | Assists in automotive-related Q&A such as basic troubleshooting, maintenance tips, and car-buying guidance using structured knowledge and FAQs.                                 |
| Video AI Prompt Enhancer                    | Takes simple user ideas and expands them into detailed, cinematic prompts for AI video tools like Sora, Veo, and Runway.                                                        |
| Frames to Video Prompter (Advanced)         | Analyzes selected video frames and auto-generates matching video prompts or continuation ideas to keep storyline and style consistent.                                          |
| AI Prompter by Dr. Rahmat Aidil             | Acts as a universal prompt engineer that rewrites and optimizes user prompts for maximum quality across text, image, and video AI tools.                                        |
| MyWondaleafJourney                          | Guides users through product education, FAQs, and personal-journey style storytelling related to Wondaleaf, including content suggestions and campaign ideas.                   |
| Research Coach                              | Helps students and researchers develop topics, frameworks, literature reviews, and data analysis questions, including SPSS and SmartPLS interpretation.                         |
| Company's Performance AI Analyzer           | Accepts financial and marketing data, then produces dashboards, trends, SWOT-style summaries, and suggestions to improve performance.                                           |
| UTS SDSC AI Agent                           | Supports UTS Student Development and Service Centre with FAQs, programme info, event details, and basic advising for students.                                                  |
| WhatsApp Customer Service Automation        | Automates common Q&A, order status updates, and lead qualification via WhatsApp, operating as a 24/7 customer service frontliner.                                               |
| Telegram's Nano_VEO Video Generator         | Generates short promo or educational videos using NanoBanana and Veo via Telegram commands for quick content production.                                                        |
| Nano Banana Ad Machine                      | Creates, tests, and optimizes ad copy, hooks, and creatives for NanoBanana-based campaigns to increase click-through and conversion rates.                                      |
| Viral Ad Videos with NanoBanana and Veo 3.1 | Designs viral-style ad video prompts, sequences, and captions for social media platforms using NanoBanana + Veo 3.1.                                                            |
| Customer Service Chat Agent                 | Acts as a general chatbot for websites or internal systems, answering FAQs and guiding users to the right services or information.                                              |
| Sora 2 Text to Video                        | Converts detailed text prompts and scripts into high-quality AI-generated videos for storytelling, marketing, and education.                                                    |
| Unified Data Lake & AI Manager              | Combines data from Excel, CSV, Google Sheets, PDFs, images, and APIs into a single structured database, then uses AI to clean, join, and interpret the data with high accuracy. |
| Vector RAG Knowledge Hub                    | Indexes documents, research papers, PDFs, and transcripts into a vector                                                                                                         |

|                                             |                                                                                                                                                                              |
|---------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                             | database so users can ask questions and get precise, citation-based answers using Retrieval-Augmented Generation (RAG).                                                      |
| Cross-Platform Business Dashboard Automator | Pulls metrics from TikTok, Shopee, Facebook, and Google Analytics into one dashboard and auto-generates weekly performance reports and recommendations.                      |
| HR & Student Analytics RAG Assistant        | Reads HR, student, and academic data from multiple systems and gives decision-makers instant answers, trends, and predictions using RAG over vectorized records.             |
| Automotive Diagnostic Chatbot               | Asks structured questions about vehicle symptoms, reads OBD-style codes or descriptions, and suggests likely issues, urgency level, and next steps for workshops or drivers. |
| Image-to-Image AI Studio                    | Takes a base photo (e.g., product, person, or scene) and generates multiple stylistic variations while preserving identity, angle, and layout for campaign A/B testing.      |
| Image-to-Video Story Animator               | Converts a single image or a small set of images into short animated clips with smooth camera motion, transitions, and captions for social media storytelling.               |
| Video-to-Frame Analyzer & Tagger            | Splits long videos into important key frames, tags each with scene descriptions, emotions, and objects, and stores them for easier editing and content repurposing.          |
| Image-to-Script Storyboard Generator        | Analyzes an image and auto-writes storyboard-style scripts, narrations, and scene descriptions that can be used to record videos or feed into video AI tools.                |
| Text-to-Real Human Voice Studio             | Transforms written scripts into natural-sounding human-like voices with multiple accents, tones, and emotions for ads, explainers, and e-learning.                           |
| AI E-Commerce Auto Lister                   | Reads product details from images, invoices, or rough notes and auto-generates optimized product titles, descriptions, SEO keywords, and hashtags for marketplaces.          |
| Smart Assignment & Timetable Scheduler      | Takes student availability and assignment rules, then auto-generates clash-free livestreaming schedules and notifies students of their allocated slots.                      |
| AI Content Repurposer                       | Takes one long video or article and automatically generates multiple short clips, carousels, captions, and script ideas adapted to TikTok, Reels, and YouTube Shorts.        |
| Customer Journey Data Stitcher              | Links customer data points from ads, clicks, chats, and purchases into one timeline per customer and uses AI to identify drop-off points and upsell opportunities.           |
| AI Voice-over Feedback Coach                | Listens to recorded presentations or live-selling sessions and gives feedback on tone, speed, clarity, and persuasive elements, plus suggests improved scripts.              |

## DEPLOYED AI SYSTEMS AND PLATFORMS

Production AI systems designed, built, and deployed for companies, universities, and public institutions, with their potential benefits towards academia and industry.

### AidjuDigital — AI-First Enterprise Operations Platform

SaaS platform where staff interact with business functions through a chatbot instead of menus: natural-language database queries, automated document generation, live dashboards, and conversational analytics.

**Academic benefit:** Serves as a living case study and teaching platform for AI-driven enterprise systems in business and MIS courses, and a research testbed for agentic AI adoption.

**Industry benefit:** Flattens the learning curve of enterprise software, reduces dependency on IT staff, accelerates reporting, and puts operational data directly in the hands of managers and executives.

## Bintulu Port — HR & Workforce Capability Intelligence (BeCOMPASS / BePACE)

People-analytics platform for a port authority covering employee insights, learning & development, study-loan administration, and capability tracking, with text-to-SQL so HR staff query workforce data in plain language.

**Academic benefit:** Provides a real-world research platform for HR analytics, capability development, and workforce-planning studies.

**Industry benefit:** Centralizes fragmented workforce information, surfaces skill gaps, supports succession and training planning, and turns slow manual HR reporting into instant self-service queries.

## Fire-Safety & Construction Compliance Engine

Processes construction drawings and regulatory documents with AI extraction (Gemini batch processing) to assess building and fire-safety compliance automatically.

**Academic benefit:** Doubles as a training tool for building-code and fire-safety education programmes.

**Industry benefit:** Dramatically faster plan-checking for fire departments, contractors, architects, and compliance consultants — expert-hours of review become an assisted process with fewer oversight errors.

## AI Fleet Management System

Manages the full vehicle lifecycle — requisition, usage logging, inspection checklists, maintenance scheduling, incident reporting, and compliance documentation — built on the company's actual fleet procedures.

**Academic benefit:** Case material for operations management, auditing, and digital-transformation teaching.

**Industry benefit:** Reduces vehicle misuse, improves maintenance planning and uptime, strengthens audit readiness, and gives management clear fleet cost, availability, and risk visibility.

## Class Attendance — Verified Attendance Platform

Combines lecturer-generated passcodes, biometric verification (fingerprint/face recognition on the student's own phone), GPS geofencing, and attendance analytics to prove physical presence.

**Academic benefit:** Eliminates proxy attendance, removes manual paperwork, flags at-risk or disengaged students early, and gives institutions reliable participation data for reporting and intervention.

**Industry benefit:** Directly adaptable to workforce time-and-attendance, site safety musters, and training-compliance verification.

## Content Creation Studio — AI Prompt-Generation Studio

Generates optimized prompts for image-generation models (Stable Diffusion / SDXL) with Gemini-assisted refinement.

**Academic benefit:** Teaches prompt engineering and generative design practically in content-creation and marketing courses.

**Industry benefit:** Marketing and brand teams produce higher-quality campaign visuals and product mock-ups faster, with less specialist skill and lower production cost.

## DeepSeek Proxy — AI Infrastructure & Model-Routing Middleware

Anthropic-compatible proxy and middleware layer for coding assistants and multi-provider model routing with provider abstraction.

**Academic benefit:** Infrastructure for AI-engineering research and student projects without single-vendor lock-in.

**Industry benefit:** Lets organizations control cost and routing of AI traffic, experiment with multiple providers behind one interface, and power internal AI development tooling at scale.

## ERP (Borderless Nexus) — Enterprise Operations / HR-as-a-Service

ERPNext/Frappe-based platform centralizing HR, operations, workflows, documents, and reporting with AI-assisted process automation and analytics.

**Academic benefit:** A hands-on ERP and digital-transformation laboratory for business and management students.

**Industry benefit:** An affordable digital-transformation backbone for SMEs and agencies — replaces scattered spreadsheets with one structured, compliant, reportable system.

## MEITD / SEEP Intelligence System — Education Programme Analytics

Monitors large-scale education-intervention programmes across schools, students, and modules, with performance analytics and an AI chatbot for querying programme data.

**Academic benefit:** Enables evidence-based education research and intervention-outcome tracking at scale.

**Industry benefit:** Gives ministries and education departments data-driven policy capability — leaders see which students need support and how programmes perform across regions.

## Tourism Intelligence Platform

Scrapes and analyzes tourism-related sources with sentiment analysis, demand forecasting, and automated executive briefing generation.

**Academic benefit:** A research platform for tourism analytics, NLP, and destination-marketing studies.

**Industry benefit:** Tourism boards and destination managers see real-time trends, public perception, and campaign performance — scattered online chatter becomes strategic intelligence.

## MQA\_UTS — Accreditation Compliance System

Manages MQA accreditation end-to-end: requirements, programme information, evidence uploads, deadlines, alerts, and AI assessment of whether submitted documents satisfy accreditation criteria.

**Academic benefit:** Turns accreditation into an intelligent, auditable workflow — universities prepare audits faster, reduce compliance risk, and maintain continuous quality assurance.

**Industry benefit:** A transferable model for compliance-heavy industries where documents must be checked against regulatory criteria.

## EMCAI — Electrical Maintenance Component AI

Combines inventory tracking, maintenance logs, tool management, alerts, and predictive insights with natural-language querying of maintenance data (Vanna + PageIndex).

**Academic benefit:** An applied case for AI in asset management, reliability engineering, and engineering education.

**Industry benefit:** Reduces downtime, improves asset visibility, detects maintenance issues earlier, and helps engineers understand failure patterns — improving safety and cost for energy operations.

## Delivery Intelligence Platform

Analyzes branch-level delivery operations (built on real Sibu delivery data) with performance dashboards and bottleneck detection.

**Academic benefit:** Logistics-analytics teaching and research grounded in real operational data.

**Industry benefit:** Courier and logistics teams move from manual reports to data-driven monitoring — spotting delays, measuring branch performance, and improving operations planning.

## Profiling — Staff Profiling & Position-Fit Evaluation

Maps people to roles by analyzing strengths, weaknesses, and job suitability with AI position-fit scoring.

**Academic benefit:** Makes academic talent placement, promotion, and leadership development structured and evidence-based.

**Industry benefit:** HR placement, promotion, and succession decisions become defensible and data-driven rather than based on informal judgment.

## SBM System — AI Document & Filing Management

Digital filing for the School of Business and Management with AI document retrieval and classification, replacing paper and scattered records with searchable workflows.

**Academic benefit:** Faster retrieval, document governance, audit readiness, and preserved institutional memory — a model administrative-efficiency case.

**Industry benefit:** A blueprint for any records-heavy organization seeking document governance and instant retrieval.

### Sentinel — Beneficial-Ownership & Fraud Intelligence

Analyzes corporate registry data to expose suspicious ownership networks with risk scoring, graph visualization, and plain-language AI explanations of complex corporate structures.

**Academic benefit:** Enables research in financial-crime analytics, corporate governance, and regulatory technology.

**Industry benefit:** Regulators and enforcement agencies prioritize investigations, reveal hidden beneficial owners, and monitor compliance from dense corporate data.

### SSR Rover — ROV Training Analytics

Monitors trainee performance in remotely-operated-vehicle pilot/technician programmes using multimodal AI analysis of video, images, and voice, with at-risk-learner prediction.

**Academic benefit:** Early identification of struggling trainees improves intervention and completion rates in vocational and workforce-development programmes.

**Industry benefit:** Measurable ROI for training providers — fewer withdrawals, better-documented competency, stronger programme accountability.

### AdatAI (Undang-Undang Adat) — Indigenous Legal Intelligence

Makes Sarawak native law and adat materials (Native Court judgments, Adat Bidayuh/Iban documents) searchable and understandable through semantic search and AI explanation.

**Academic benefit:** Preserves indigenous legal knowledge and enables legal scholarship over materials otherwise locked in scattered documents.

**Industry benefit:** Courts, public agencies, and practitioners access complex indigenous legal materials efficiently and consistently.

### Voice Call — Self-Hosted Voice-AI Platform

Telephony-automation platform (Pipecat-based) for building real-time AI phone agents, campaigns, workflows, and SDKs with speech recognition and synthesis.

**Academic benefit:** A research and teaching platform for conversational AI and voice-interface design.

**Industry benefit:** Organizations run AI-driven customer service, appointment booking, reminders, and outreach calls with full data sovereignty — critical for regulated or privacy-sensitive sectors.

### YB Scraper (Rumah Digital) — Constituency Intelligence

Civic-engagement platform that scrapes public information and analyzes community sentiment and emerging issues.

**Academic benefit:** A platform for computational social science and civic-technology research.

**Industry benefit:** Elected representatives and public offices respond faster to citizen concerns and make data-driven decisions — technology for responsive governance.

### Borderless Intelligence — Leadership Capability Analytics

Scores leadership-programme participants on a 100-point Leadership Potential Index with AI cohort chat, growth-velocity scoring, and automated executive-briefing report generation.

**Academic benefit:** Objective, longitudinal assessment of leadership-development programmes replaces subjective evaluation.

**Industry benefit:** L&D teams and management get data-driven talent ranking and individualized development insight, with branded reports generated automatically.

### Meetily-Web — Multilingual Meeting Transcription

Self-hosted platform transcribing audio/video meetings in Bahasa Malaysia, English, and Mandarin with summarization and action-item extraction.

**Academic benefit:** Lectures, seminars, and interviews become searchable transcripts and summaries — institutional knowledge is captured, not lost.

**Industry benefit:** Private, locally-hosted meeting intelligence for organizations where confidentiality matters.

## Meeting Assistant — Privacy-First Local Meeting AI

Desktop assistant performing fully local (on-device) transcription and summarization with no cloud dependency (Rust-based).

**Academic benefit:** Reliable minutes for confidential research and management discussions without exposing sensitive audio.

**Industry benefit:** Organizations handling confidential strategy get meeting intelligence with zero external data transfer.

## Whisper-RS-Local — Local Speech-to-Text Engine

Rust bindings for whisper.cpp providing offline, private speech recognition — the technical backbone of the transcription and voice products.

**Academic benefit:** Foundation for speech-technology research and accessibility tooling.

**Industry benefit:** Enables private transcription, accessibility, and voice-interface products where privacy, speed, or offline operation is essential.

## Voice — Audio Data Layer

Storage and support infrastructure (MinIO) holding recordings and processed voice data feeding the transcription and voice-agent workflows.

**Academic benefit:** Enabling infrastructure for the institution's speech and voice research stack.

**Industry benefit:** Enabling infrastructure for production voice and transcription deployments.

## SBM Website — Institutional Website

School website with branding, lecturer profiles, and rich media assets.

**Academic benefit:** Supports student recruitment, stakeholder confidence, and professional institutional identity.

**Industry benefit:** Demonstrates modern institutional branding and digital-presence standards.

## SEEP — Programme Communication Site

Public-facing website for an education-enhancement programme presenting goals, updates, and achievements.

**Academic benefit:** Transparency and stakeholder engagement for parents, students, and ministries.

**Industry benefit:** A model for public-programme communication and accountability.

## UTS All — University AI-Agent Concept

AI-first campus assistant retrieving policies, procedures, and academic information for institutional operations.

**Academic benefit:** Students and staff self-serve answers to common queries, cutting repetitive administrative inquiries and improving access to institutional knowledge.

**Industry benefit:** A template for enterprise knowledge agents in any policy- and procedure-heavy organization.

## E-Commerce Class Tracker — Social-Commerce Assignment Tracker

Tracks student TikTok profile links and follower targets automatically from Google Sheets.

**Academic benefit:** Business schools assess social-commerce and creator-marketing skills with real, measurable data instead of subjective grading.

**Industry benefit:** The same pattern monitors creator-campaign progress against measurable targets commercially.

## Code-Review-Graph — Codebase Knowledge Graph

Builds a persistent knowledge graph of a codebase with a VS Code extension and MCP integration for blast-radius and dependency analysis.

**Academic benefit:** Software-engineering research and teaching on AI-assisted code review and program comprehension.

**Industry benefit:** Software teams understand what a change affects before making it — fewer bugs, faster onboarding, more reliable AI code review.

## Karpathy Skills — AI Coding-Agent Guidelines

Reusable skills and behavioral guidelines for AI-assisted development: surfacing assumptions, surgical changes, review discipline.

**Academic benefit:** Teaching material for disciplined, safe AI-assisted engineering practice.

**Industry benefit:** Raises the quality and safety of AI-assisted engineering across development teams.

### AI CV & Document Generation

Python pipeline generating academic CVs and professional documents with AI-assisted drafting and formatting.

**Academic benefit:** Organizes and presents academic achievements for promotions, grants, and institutional reporting.

**Industry benefit:** A pattern for automated professional-document pipelines in any organization.

### SBM Platform — Lecturer Development Platform

Internal web platform where each lecturer manages upskilling records, builds a structured CV, tracks warning-letter status, signs digital consent (CONTRIBUTE membership with automated compliance tracking), and generates activity summaries.

**Academic benefit:** Transparent, auditable faculty development and HR governance — upskilling evidence, compliance, and recognition in one system.

**Industry benefit:** A model for staff-development and policy-compliance platforms in any professional organization.

### ICE — Integrity Critical Element Dashboard (CPM2)

Barrier/integrity dashboard for oil & gas project management — an official design-activity deliverable adopted in an oil & gas vendor engagement, covering cloud O&G project management and design-workflow digitalisation.

**Academic benefit:** Applied research in AI for engineering project controls and integrity management.

**Industry benefit:** Cloud-based project management and integrity-critical-element monitoring for oil & gas operators — safer projects, digitalised design workflows.

### UTS Registration — Student Registration & Hostel System

Student registration platform with document handling, hostel information, and structured intake workflows.

**Academic benefit:** Streamlined student intake and hostel allocation with fewer manual errors and faster processing.

**Industry benefit:** A template for high-volume onboarding and document-driven registration workflows.

### Citizen-First Municipal Parking PWA

Interactive PWA prototype of a redesigned municipal parking app unifying zone detection, grace periods, charge caps, and dispute flows — designed so citizens are never punished for system failures.

**Academic benefit:** A civic UX and service-design case study for public-sector digitalization.

**Industry benefit:** A fair, senior-friendly municipal parking system addressing every publicly documented complaint of the legacy app.

### Hermes Auto FB — Automated Social Content Pipeline

Automated Facebook content pipeline with AI image/video prompt builders, creative generation, and scheduled posting.

**Academic benefit:** Teaching platform for marketing automation and generative content operations.

**Industry benefit:** Sustained, consistent brand presence at a fraction of manual content-production cost.

### Final Exam Checker — AI-Assisted Exam Review Platform

Web platform supporting AI-assisted checking and review of final examination papers.

**Academic benefit:** Faster, more consistent exam moderation and quality verification for academic departments.

**Industry benefit:** A pattern for automated document quality-assurance workflows.

### Email Handler — AI Email Automation Agent

AI agent for email triage, drafting, and correspondence automation.

**Academic benefit:** Relieves academic and administrative inbox load, freeing staff time for higher-value work.

**Industry benefit:** Round-the-clock correspondence handling and consistent response quality.

### SBM Classroom — Digital Classroom Platform

Web platform supporting teaching delivery and classroom management for the School of Business and Management.

**Academic benefit:** Digital classroom management and structured teaching delivery for the faculty.

**Industry benefit:** A pattern for internal training-delivery platforms.

### n8n Workflow Library — Automation Workflow Collection

Curated and indexed library of n8n automation workflows for reuse across projects.

**Academic benefit:** Reusable automation building blocks accelerating research and administrative tooling.

**Industry benefit:** Reusable building blocks that shorten delivery time for business-process automation.

## TRAINING AND CERTIFICATES
